

Free Non-Verbal Reasoning Test

10 questions with a worked solution for every one

This is a full-length practice test. Each question shows a sequence of shapes that changes by a consistent rule; pick the option that comes next. Give yourself 10 minutes and work without checking the answers as you go. Every question has exactly one correct answer.

The worked solutions start after the last question. They name the rule at work and explain every wrong option, so a question you get wrong tells you something.

Questions	10
Suggested time limit	10 minutes
Format	Multiple choice, pick the next shape
Answers	Included, with full worked solutions

Questions

QUESTION 1 OF 10

Which shape comes next in the sequence?

A) B) C) D)

QUESTION 2 OF 10

Which shape comes next in the sequence?

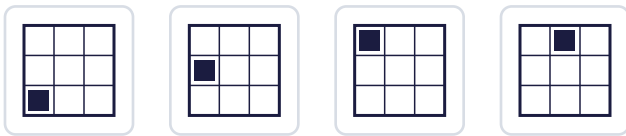

A) B) C) D)

QUESTION 3 OF 10

Which shape comes next in the sequence?

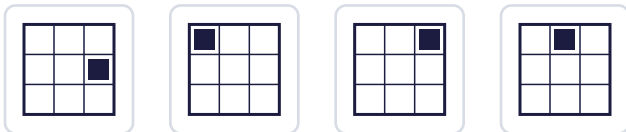

A)

B)

C)

D)

QUESTION 4 OF 10

Which shape comes next in the sequence?

A)

B)

C)

D)

QUESTION 5 OF 10

Which shape comes next in the sequence?

A)

B)

C)

D)

QUESTION 6 OF 10

Which shape comes next in the sequence?

A)

B)

C)

D)

QUESTION 7 OF 10

Which shape comes next in the sequence?

A)

B)

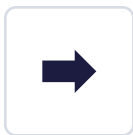

C)

D)

QUESTION 8 OF 10

Which shape comes next in the sequence?

A)

B)

C)

D)

QUESTION 9 OF 10

Which shape comes next in the sequence?

A)

B)

C)

D)

QUESTION 10 OF 10

Which shape comes next in the sequence?

A)

B)

C)

D)

Answers and worked solutions

Every wrong option is explained too, not just the correct answer.

Question 1

Correct answer: A

The answer is A. Each chevron turns 90° anticlockwise from the one before it. Continuing the turn gives the chevron at 180° . Option B repeats the last shape without applying the final turn. Option C over-rotates by one extra 90° step. Option D turns back the way the sequence came instead of continuing.

Question 2

Correct answer: A

The answer is A. The triangle is flipped left-to-right at each step, so the orientation alternates. After the fourth shape (flipped) the sequence returns to the original, right angle at the bottom-left. Option B rotates the triangle 90° clockwise rather than reflecting it. Option C rotates the triangle 180° rather than reflecting it. Option D keeps the flipped orientation instead of alternating back.

Question 3

Correct answer: C

The answer is C. The shaded cell moves one position clockwise around the grid at each step. The next clockwise position is the top-right cell. Option A skips a cell, moving two positions clockwise instead of one. Option B moves the marker anticlockwise, the wrong way round. Option D leaves the marker where it was, ignoring the move.

Question 4

Correct answer: C

The answer is C. The diamond alternates between shaded and unshaded at each step. The fourth shape is unshaded, so the next one is shaded again. Option A leaves the shape unshaded instead of toggling the fill back to shaded. Option B both fails to shade the shape and enlarges it. Option D shades the shape correctly but enlarges it, though the size never changes.

Question 5

Correct answer: B

The answer is B. The triangle changes size by the same amount each step, getting smaller. The next triangle continues the progression to width 16. Option A changes size in the wrong direction. Option C changes size by two steps instead of one. Option D repeats the previous size instead of changing it again.

Question 6

Correct answer: C

The answer is C. The number of circles increases by 1 at each step. The next group therefore has 5 circles. Option A adds two steps instead of one. Option B reduces the count instead of increasing it. Option D repeats the previous count without adding any more.

Question 7

Correct answer: C

The answer is C. The shapes repeat in a fixed three-step cycle: pentagon, then diamond, then circle. After the cycle restarts with the pentagon, the next shape is the diamond. Option A jumps to the third shape in the cycle, skipping one. Option B introduces a square, a shape the cycle never uses. Option D repeats the shape just shown rather than advancing the cycle.

Question 8

Correct answer: C

The answer is C. Each arrow turns 90° anticlockwise from the one before it. Continuing the turn gives the arrow at 90°. Option A turns back the way the sequence came instead of continuing. Option B over-rotates by one extra 90° step. Option D repeats the last shape without applying the final turn.

Question 9

Correct answer: B

The answer is B. The triangle is flipped left-to-right at each step, so the orientation alternates. After the fourth shape (flipped) the sequence returns to the original, right angle at the bottom-left. Option A rotates the triangle 180° rather than reflecting it. Option C rotates the triangle 90° clockwise rather than reflecting it. Option D keeps the flipped orientation instead of alternating back.

Question 10

Correct answer: B

The answer is B. The shaded cell moves one position clockwise around the grid at each step. The next clockwise position is the top-right cell. Option A moves the marker anticlockwise, the wrong way round. Option C skips a cell, moving two positions clockwise instead of one. Option D leaves the marker where it was, ignoring the move.

Where to go next

That was one full-length test. Employers usually set several, under time pressure, in formats tailored to the role you applied for.

Practice packages give you the volume and the conditions:

- Hundreds of questions across every format
- Tests matched to specific employers and test publishers
- Timed conditions with your progress tracked over weeks
- See how your score compares with other candidates
