The correct answer is Set B because there is a column of three figures. This is the common feature for all six of the Set B blocks. The position, size and colour of each of the figures doesn’t affect the answer.

**Correct Answer: Set B**

The correct answer is Set B because there is a column of three figures. This is the common feature for all six of the Set B blocks. The position, size and colour of each of the figures doesn’t affect the answer.

**Correct Answer: Set B**

The correct answer is Set A because there is a row of three figures. This is the common feature for all six of the Set A blocks. The position, size and colour of each of the figures doesn’t affect the answer.

**Correct Answer: Set A**

The correct answer is Set B because there is a column of three figures. This is the common feature for all six of the Set B blocks. The position, size and colour of each of the figures doesn’t affect the answer.

**Correct Answer: Set B**

The correct answer is Neither since it does not have Set B’s common feature of an arrow pointing to a square, nor does it have Set A’s common feature of an arrow pointing to a triangle. In fact, whilst there is an arrow this points away from any of the shapes.

**Correct Answer: Neither**
